Subject: Use of BOE pumps or any portion of BOE facility to route other industrial waste to Sioux City
Date: Tuesday, April 30, 2019 12:07:45 PM
Importance: High

Lance,

To follow up on your phone call this morning regarding wastewater flow from BPI/Empirical and Richardson- as of midnight tonight no discharge permit will exist that allows flow through any portion of BOE's facility. If you were suggesting that you will use BOE pumps and route any flow through BOE which could then be sent through your collection system to the Sioux City POTW, that is not authorized in any form. No flow is to go through or utilize BOE facilities in any way, as this is not permitted.

My understanding is that the City of South Sioux City owns an operational valve that allows flow to completely bypass the BOE facility and that you recently installed a pump that allows flow to be routed without any use of the BOE facility.

Mark Simms
